

The Regional Innovative Network on Health Technologies

The Regional Innovative Networks

These are partnerships recognized by the Veneto Region to connect companies and universities in the promotion of innovation

RIS3: the Intelligent Specialization Strategy

The Regional Operational Program - POR FESR, "Strengthening research, technological development and innovation"

Why set up a RIR?

- TO CREATE A NETWORK OF THE VARIOUS EXCELLENCES PRESENT ON THE NATIONAL TERRITORY, SUCH AS COMPANIES IN THE VARIOUS SECTORS, UNIVERSITIES, PUBLIC RESEARCH BODIES, ADVANCED PRODUCTION COMPANIES AND HIGH VALUE-ADDED SERVICES.
- TO PROMOTE AND ENHANCE COOPERATION AND INNOVATION, PROVIDING INTERACTION AND INTEGRATION BETWEEN THE RESEARCH SYSTEM, THE ENTREPRENEURIAL AND PRODUCTIVE SECTORS AND PUBLIC INSTITUTIONS WITHIN THE HEALTH SECTOR.
- TO CREATE OPPORTUNITIES OF CONNECTION BETWEEN BUSINESS AND RESEARCH, FACILITATING ACCESS TO PUBLIC FUNDING.

Vision

RIR wants to create a network to organize the excellences present in the Veneto region in the areas of technologies and innovations related to life sciences. The integration of excellences with the digital and innovation sectors can constitute an element of improvement of our society with the creation of new opportunities for growth and development in the field of technologies and services related to health, digital health, and the well-being of individuals.

The RIR wants to be the promoter of a social role by accompanying even the most fragile people for an active inclusion in society.

The RIR wants to create a virtuous system that is also able to facilitate public-private collaboration through the implementation of cutting-edge technologies, developing innovative products and services for the healthcare market.

The RIR intends to stimulate interaction between member companies and the world of research, to promote a system able to propose solutions capable of addressing emergency situations such as the one we are experiencing linked to the Covid 19 pandemic.

The Strategic Plan and the objectives

Technological innovation can play an important role in supporting the efficiency of the health system, ensuring quality of performance and reducing costs. Innovate by promoting the sustainability of the system while at the same time measuring the real benefits introduced.

The RIR wants to develop technologies and promote their usage in the health sector with the aim of improving treatments and living conditions, and to promote social reintegration in the current and difficult economic context.

Tech4Life's objectives can be described as follows:

1. Technologies for health, medical device, robotics and ICT
2. Technologies for personal well-being and for the sustainability of living environments
3. Training: fostering the relationship between strategic players involved in the health supply chain.

The RIR intends to launch an observatory on the new skills required by the market, based on the professional needs that will be identified by the companies.

Companies and Universities involved

Companies

Over 50 companies have supported the project

Universities

- **Università Cà Foscari** – Department of Environmental Sciences, Informatics and Statistics, Department of Molecular Sciences and Nanosystems, Department of Economics
- **Università Iuav di Venezia** – Department of Architecture and Arts
- **Università degli Studi di Verona** – Department of Computer Science, Department of Business Administration, Department of Neuroscience, Biomedicine and Movement
- **Università degli Studi di Padova** – Interdepartmental Center for Mechanics of Biological Materials
